VST Delivery of EVR Components

05.07.09

Reference: April 8, 2009 CARB decision:

Pre-enhanced vapor recovery (EVR) phase II balance components may be used temporarily as replacement components for Vapor Systems Technologies, Inc. (VST) EVR Phase II and pre-EVR Phase II balance systems.

VST's Response

Increased Production

To meet the increasing demand, VST has rapidly increased production:

- Nearly doubled production of all components.
- VST is working diligently to make sure that EVR components are readily available so that GDF's will not have to use non-EVR components to maintain the VST system.

Non-EVR Components & ISD Alarms

The field reports that non-EVR components are causing ISD alarms:

- Using non-EVR components may cause ISD alarms since the components do not meet the same performance criteria
- Most notably is back pressure of hoses and breakaways. The field reports that the same ISD alarms have actually followed the non-EVR hose components. VST is investigating these field reports and will report our findings to CARB.

Start-Ups

Another consideration and concern:

- Regulators demand that all EVR components be installed for start-ups.

Now for the Good News!

- VST has shipped inventory of EVR hoses and breakaways to all stocking distributor locations in California.
- Any new orders for hoses and breakaways are shipping within 3-5 days.
- EVR nozzles have a 4-week delivery, but by the week of May 18th, VST expects to be shipping stock orders within two weeks.
- By June 1, 2009, VST expects to be back to our normal 24-48 hour delivery schedules for all components.
